COMPLETE NON-TECHNICAL BLUEPRINT

School Management System

Web Application + Android App
Software Requirements Specification

SCHOOL	**Single school**
LANGUAGES	**Urdu • Arabic • English**
USERS	**Admin • Teacher • Student**

One school. One connected system.

A shared view of school operations across web and Android.

Simplify operations

Admissions, attendance, fees, academics and reports in one organized workflow.

Connect users

Admin, teachers and students see the information relevant to their role.

Built for languages

Urdu and Arabic use RTL layouts; English uses LTR layout.

EXPECTED OUTCOMES

- Less duplicate paperwork and more consistent records
- Clearer fee balances, attendance and academic progress
- Controlled access and traceable changes to sensitive records

Scope at a glance

A practical single-school system, with optional modules reserved for later.

Included in scope

Login and roles • admissions • staff • classes • attendance • fees • homework • exams • notices • reports

Working assumptions

One school • configured academic sessions • school-approved fee and grading rules • bilingual content review

Future phase

Parent portal • transport • library • inventory • payroll • biometric integration

DESIGNED FOR A PHASED ROLLOUT

01 CORE

Admissions, attendance, fees

02 ACADEMICS

Homework, exams, results

03 EXPANSION

Parent portal and add-ons

Three roles. Clear responsibilities.

Access follows role and assignment; private records stay protected.

A

ADMIN

Manage the school

Admissions, staff, setup, fees, reports, notices and approved corrections.

T

TEACHER

Teach and assess

Assigned classes, attendance, homework, assignment review and marks entry.

S

STUDENT

Stay informed

Own attendance, timetable, homework, fees, notices and published results.

Students can only view their own private records; teachers are limited to assigned classes and subjects.

The application, module by module

Each module has defined screens, rules and acceptance checks in the SRS.

01 **Accounts & access**

02 **School setup**

03 **Student records**

04 **Teacher & staff**

05 **Attendance**

06 **Fees & payments**

07 **Timetable & homework**

08 **Exams & results**

09 **Notices**

10 **Reports & audit**

Each module includes: key features • screens • business rules • acceptance criteria • reports where relevant

From admission to academic progress

A student's history remains intact across sessions, promotions and leaving.

01

ADMIT

Capture details and assign admission number.

02

ALLOCATE

Set session, class, section and roll number.

03

MANAGE

Maintain attendance, fees and daily academic work.

04

ASSESS

Enter marks, review and publish results.

05

PROGRESS

Promote, transfer or withdraw without losing history.

Core principle: keep past-session records; do not overwrite history during promotion or withdrawal.

Attendance that is easy to trust

A clear daily workflow with controlled corrections.

- **Choose class & date**
- **Mark student status**
- **Save with confirmation**
- **Review monthly report**

Status options

Present • Absent • Late • Approved leave

Final list is configured by school policy.

Reports

Daily totals, class-wise summaries, monthly percentage and student history.

Corrections retain who changed the record, when and why.

Fees & payments — online and offline

Balances, receipts and collection reports must agree with the payment history.

01

PLAN

Fee heads, installments, dates

02

INVOICE

Student-wise amount and due date

03

PAY

Online verification or authorized offline entry

04

RECEIPT

Receipt, allocated amount and balance

Partial payments

Outstanding balance reduces by the amount paid.

Payment verification

Online status is verified; app redirect alone is not proof.

Controlled adjustments

Refunds and concessions require approval and a reason.

Exams & report cards

Results move through entry, review and publication.

School-approved grading, rounding, pass and absent rules must be agreed before configuration.

Designed for Urdu, Arabic & English

Direction, reading order and text rendering are part of the acceptance criteria.

اردو

URDU

RTL • Right-to-left

العربية

ARABIC

RTL • Right-to-left

English

ENGLISH

LTR • Left-to-right

Language switch must not alter saved records or automatically translate names.

Forms, notifications, receipts and reports must remain readable in the selected language.

Reports that support decisions

Authorized users get the right view, with totals that reconcile to saved records.

STUDENTS	Strength, admissions, withdrawals
ATTENDANCE	Absentees, monthly percentage
FINANCE	Collection, dues, concessions, refunds
ACADEMICS	Exam results, subject performance
OPERATIONS	Homework status, notice and audit history

PDF/Excel export where approved • Role-based report access • Filter by session, date, class and status

Trust, privacy & reliability

Sensitive school records need controlled access and recoverable history.

ROLE CONTROL

Users only see permitted data and actions.

AUDIT TRAIL

Important changes record who, when and why.

BACKUP & RESTORE

Protected backups and tested restoration process.

PAYMENT SAFETY

Verify payment status; protect receipts and balances.

DATA PRIVACY

Limit access to student documents and personal data.

RELIABILITY

Prevent duplicate records and preserve academic history.

Agree measurable targets before launch: user volume, supported devices, response times, backup frequency and support hours.

How the school accepts the system

Use realistic scenarios, not only a visual demo.

01	**Review requirements**	Approve fields, fee rules, grading, language and scope.
02	**Review screen designs**	Confirm the school workflows before full build.
03	**Test each role**	Verify Admin, Teacher and Student access boundaries.
04	**Test exceptions**	Partial/failed payment, attendance correction, result correction and promotion.
05	**Sign off**	Close critical issues; confirm training, backup and support.

What the development partner must deliver

Written handover protects the school beyond launch day.

Product & quality

- Approved SRS and change log
- Web/Android screen designs
- Working features for agreed releases
- Role/permission testing evidence
- Test cases and known limitations

Handover & ownership

- User guides and staff training
- Deployment and backup instructions
- Support and maintenance terms
- Data export and ownership terms
- Source-code ownership/licensing agreement

Price, delivery date, service levels and ownership must be agreed separately in writing.

Suggested implementation roadmap

Release boundaries can be adjusted after effort and budget estimation.

RELEASE 1

CORE OPERATIONS

Login, setup, admissions, staff, attendance, fees, basic reports.

RELEASE 2

ACADEMICS

Timetable, homework, exams, results, notices and student app.

RELEASE 3

ENHANCEMENTS

Parent portal, transport, library, inventory, payroll and integrations.

Each release is tested and accepted before it is used for live school operations.

Decisions to finalize before quotation

These inputs affect effort, cost and delivery expectations.

- School name, classes, sections and expected user volume
- Fee heads, installments, concessions, refunds and payment provider
- Exam types, grade bands, pass criteria and rounding
- Attendance statuses, correction approvals and notifications
- Android device support and exact mobile feature list
- Approved Urdu, Arabic and English terminology
- Data migration, hosting, backups, support, warranty and ownership

Outcome: a clear, testable scope for a secure, colourful, multilingual school management system.
